AND THE
FRIENDS OF THE ARMY MEDICAL LIBRARY
Washington, D. C.

A NEW MICROFILM VIEWER

After many delays which were occasioned by the war emergency, the microfilm viewer pictured above has finally been put into quantity production. It is being sent now, to all those who have asked to be put on the list to receive it. To others who request microfilms from the Photoduplication Service of the Army Medical Library, it will be sent on approval. The price, \$3.75, is what we transmit to the manufacturer. Our own contribution is simply that of acting as intermediary in getting them promptly into the hands of those who need them.

The viewer is provided with a space for the film which is large enough to receive a kodachrome or other pictorial slide. This will enable the manufacturer to offer them to the general public at a later date, through photographic supply dealers. Thus will be reached a sufficiently large market to permit an eventual lowering of the price.

A microfilm viewer of this type has the advantage that it can be held before the eyes while the body assumes whatever position is most comfortable, instead of requiring the position to be adjusted to that of a projector screen or of the pages of a bound volume. It should be noted that the first reaction of most persons who examine a monocular microfilm viewer is that it is difficult to use. Naturally, it is quite different from reading a printed page. Considering the relative infrequency of reading films and the far greater convenience of being able to read them at your desk instead of having to go to a central office to use a projector or having to make long trips to libraries to consult the originals, an effort to accustom oneself to a monocular viewer is well worthwhile in spite of difficulties experienced in its use.

It is adapted especially to the needs of those in isolated places and of those who wish to take the literature pertaining to their work, to their homes or elsewhere for more leisurely study than is possible in the laboratory or the library.

Orders, including payments for the microfilm viewer shown above, should be sent to

Medicofilm Service
